

And the Winner is...Lighting & Lowering Systems

I guarantee from this point on when you watch the Oscars® you will think of Lighting & Lowering Systems. Why? Because our MLS-1100 Motorized Lowering System was selected and installed in the main foyer of The Kodak Theater. The chandelier is located in the center of the spiral staircase that leads the Stars to their reserved balcony seats. It safely lowers their 800+Lbs. chandelier 60ft to the floor for easy maintenance.

Our system was selected for many reasons:

- We have four different safety devices incorporated into our system. It mechanically locks the fixture into place taking all tension off the cable.
- Our System is made to last. We use all corrosion resistant parts.
- Our Control panel is easy to operate and install. Because it is programmable, the operator can “teach” it to lower to the same spot each and every time.
- Our Motorized Lowering System is rated to lift up to 1100 Lbs.
- We have technicians available to oversee and guide the contractors through the installation process.

The Kodak Theater was built at a cost of \$94 million dollars and was designed by the internationally-renowned Rockwell Group. Their task was to build a hall as glamorous as its onstage artists and celebrity guests, yet capable of serving the enormous technical needs of a live worldwide television broadcast on Oscar® night. They wanted to use the most modern and up to date technology available to them. Our system makes their daily cleaning regime much easier. So next time you are at an Oscars Party you can bring up a little Kodak Theater trivia.
